Methanex: The Global Methanol Leader

Investor Presentation | July 2020
Forward-looking statements & non-GAAP measures

Information contained in these materials or presented orally on the earnings conference call, either in prepared remarks or in response to questions, contains forward-looking statements. Actual results could differ materially from those contemplated by the forward-looking statements. For more information, we direct you to our 2019 Annual MD&A and our second quarter 2020 MD&A, as well as slide 34 of this presentation.

This presentation also contains certain non-GAAP financial measures that do not have any standardized meaning and therefore are unlikely to be comparable to similar measures presented by other companies. For more information regarding these non-GAAP measures, please see our 2019 Annual MD&A and our second quarter 2020 MD&A.

All amounts are shown in US dollars except where otherwise stated.
Global industry leader well-positioned to capitalize on market recovery

1. **Global methanol leader**

   Global industry leader with leading market share, global production footprint and integrated global supply chain that enables us to be the supplier of choice to customers around the world.

2. **Long-term industry outlook remains positive**

   Essential ingredient used in a variety of chemical derivatives and serves as a building block to produce a multitude of everyday consumer and industrial items. Also used in an increasing number of energy-related applications and as a clean-burning and economic alternative fuel.

3. **Strong cash flow generation and shareholder returns**

   Assets well positioned on industry cost curve to be competitive through the methanol price cycle. Significant cash flow potential driven by leverage to methanol prices. Returned $1.9 billion to shareholders since January 1, 2013.

4. **Growth potential**

   Unique growth opportunities in Louisiana allowing Methanex to increase production capacity at advantaged capital costs when conditions improve.
In an industry where scale and flexibility drive value...

Methanex is the world’s largest producer and supplier of methanol

Over 9 million tonnes of operating capacity

6 manufacturing sites with 11 plants strategically positioned to supply every major global market

Integrated global supply chain and distribution network

Waterfront Shipping subsidiary enables seamless transportation network

Local customer service in every major market to quickly adapt and respond to customers’ needs

Integrated global capabilities enable a clear competitive advantage of secure and reliable supply
Growing production with a clear focus on shareholders

**Production**
(M tonnes)

- 2012: 4.1
- 2013: 4.3
- 2014: 4.9
- 2015: 5.2
- 2016: 7.0
- 2017: 7.2
- 2018: 7.2
- 2019: 7.6

**Shares outstanding**

- 2012: 94.3
- 2013: 96.1
- 2014: 92.3
- 2015: 89.7
- 2016: 89.8
- 2017: 83.8
- 2018: 77.3
- 2019: 76.2

**Production per thousand shares**
(M tonnes)

- 2012: 43
- 2013: 45
- 2014: 53
- 2015: 58
- 2016: 78
- 2017: 86
- 2018: 93
- 2019: 100

**Balanced approach to capital allocation**

- Invested approximately $2.6 billion in capital expenditures and grew from 7 to 11 plants in operation
- Returned approximately $1.9 billion of capital to shareholders through dividends and share buybacks

1 From January 1, 2013 to June 30, 2020
Resilient business model and strong liquidity position

**Strong liquidity position**
- Nearly ~$800 million of cash on hand at end of Q2 2020
- Recently negotiated meaningful financial covenant relief
- No near-term debt maturities
- Focused on cash preservation and continue to evaluate all options to ensure we maintain financial capacity and flexibility

**Continue to deliver secure and reliable supply to our customers around the world**
- Integrated global capabilities with network of production sites and extensive global supply chain and distribution network
- Well-positioned to generate long-term value over the commodity cycle

---

**Recent actions to protect business and preserve cash**

1 Reflects original and revised forecasted spending from 4/1/2020 to 9/30/2021
2 Reflects $100 million in annual cash savings
Long-term industry outlook remains positive
Methanol is an essential ingredient in modern life

TRADITIONAL CHEMICAL APPLICATIONS

End uses
- Essential ingredient used in a variety of chemical derivatives and serves as a building block to produce a multitude of everyday consumer and industrial items
- Limited, if any, cost-effective substitutes for methanol-based chemical derivative products

Demand drivers
- Linked to GDP and industrial production levels, particularly automotive and construction markets

ENERGY-RELATED APPLICATIONS

End uses
- Used in an increasing number of energy-related applications and as a clean-burning and economic alternative fuel

Demand drivers
- Influenced by energy prices, price of end products and government regulations/policies that support clean-burning fuels

Represented in the following applications:
- Methanol-to-olefins (MTO)
- Methyl tertiary-butyl ether (MTBE)
- Fuel applications
Methanol can be used to produce olefins, which are then used to produce a variety of everyday products.

<table>
<thead>

#### Downstream Products
- **Packaging**
- **Construction**
- **Textiles**
- **Containers**
- **Consumer goods**
- **Household & consumer goods**
- **Insulation, bedding**
- **Computers**
Methanol is a clean-burning alternative fuel

Marine fuel that meets environmental regulations

- Regulations (IMO 2020) require cleaner-burning fuels
- Methanol is a clean-burning fuel that meets regulations and is cost competitive over the cycle
- Approximately 40% of Waterfront Shipping’s (Methanex’s wholly owned subsidiary) fleet is able to run on methanol, and other low-sulphur fuels which provides flexibility

Vehicle fuel that reduces emissions

- Methanol is an affordable gasoline substitute in China
- Reduces emissions when blended with or substituted for gasoline
- Several other countries are at the assessment or near-commercial stage for low-level methanol fuel blending

Lower emission fuel source

- Methanol is used as an alternative to coal for industrial boilers and kilns to reduce emissions
- Currently represents approximately two million tons of demand

Represents significant upside potential for long-term demand
Long-term industry supply/demand fundamentals remain strong

NEAR-TERM OUTLOOK

• Uncertain near-term demand outlook due to impact of COVID-19 on manufacturing activity and low oil prices

• Current methanol prices at cyclical lows and estimated to be marginally below cash costs of the industry marginal producer

• Expect rationalization of high-cost industry supply in a sustained low-price environment to the benefit of low-cost producers

• Near-term large-scale capacity additions (Trinidad, United States, Iran, China)¹ face uncertain timing given state of global economy and low methanol price environment

LONG-TERM OUTLOOK REMAINS INTACT

• Over the long-term, we believe that new industry capacity additions will be needed to meet demand growth

• Continued long-term demand growth for methanol as an essential ingredient used in countless everyday products, an increasing number of energy-related applications and as a clean-burning and economic alternative fuel

• Limited industry capacity additions expected post 2022 based on significant capital cost and uncertain near-term outlook

¹ Trinidad (Caribbean Gas Chemical Ltd. – 1.0M tonnes), United States (Koch Methanol/Yuhuang – 1.7M tonnes), Iran (Bushehr – 1.7M tonnes, Kimiya Pars – 1.7M tonnes) and China (6.0M tonnes net of expected supply rationalizations).

Global, pure-play methanol leader
Industry leadership is core to our strategy and superior performance

Scale and flexibility enables Methanex to be the supplier of choice to customers around the world

- Strong customers that are leaders in their industry
- Ability to optimize global sourcing plans while maintaining security of supply for customers
- Improved industry structure: new market development, product stewardship and advocacy

We continually enhance this key value driver by growing our production as the market grows

- ~13% global market share – double that of our next competitor
- Unique global position as the only supplier with well-established production and sales in all major regions

Source: Methanex
Clear competitive advantage from integrated global capabilities

Investing in industry-leading, secure, reliable supply from a global network of plants is a fundamental driver of long-term results

• Network of production sites to supply every major global market
• Fleet of dedicated ocean vessels
• Extensive integrated global supply chain and distribution network
• “Local” customer service
Methanol customers value secure and reliable supply

• 30% of global industry demand from top 20 consumers
  – Reflects a broad and diversified consumer base of global chemical companies and end users

• Methanex supplies primarily traditional chemical derivative customers who value:
  – Security of supply
  – Global presence
  – Quality product
  – Commitment to Responsible Care®

Responsible Care is a UN recognized sustainability initiative adopted by the global chemical industry
Methanex is well positioned on the global industry cost curve

- Methanex plants are competitive across a wide range of methanol prices – we estimate that our assets are positioned on the low-to-mid portion of the industry cost curve
- Flat portion of cost curve provides price support in a low energy price environment
- Industry has high cost operators and responds to periods of excess supply or demand
- Steep high end of cost curve reflects high cost coal and natural gas-based production in China
- Other higher cost regions are Russia, Europe, India

**Illustrative methanol industry cost curve**

In late 1Q 2020, we idled our Titan plant in Trinidad and Chile IV plant to respond to lower methanol demand due to the COVID-19 pandemic and lower oil prices.

---

1 Current potential = reflects New Zealand operating rate of 85% (1.9 million tonnes), Trinidad operating rate of 85% (1.7 million tonnes) and Chile operating rate of 75% (1.3 million tonnes). We cannot predict actual gas restrictions at these plants.

2 Includes annual operating capacity for existing plants plus future incremental capacity from Geismar debottleneck project (0.2 million tonnes) and Geismar 3 project (1.8 million tonnes).
Geismar 3 project has significant capital and operating cost advantages

Project overview

- Size: 1.8 million tonnes per year
- Location: Geismar, Louisiana; adjacent to existing G1 and G2 facilities
- Status: on temporary care and maintenance
- Continue to explore partnership arrangements

Three distinct advantages vs. US Gulf greenfield projects

- Achieves significant capital cost savings by using excess hydrogen from G1 and G2 to eliminate need for a primary reformer
- Brownfield site: shared piperack capacity, control rooms, storage tanks, etc.
- Well-situated industrial park: nearby oxygen supply, utilities, marine terminal

July 2020: Geismar 3 site
Geismar 3 project is significantly de-risked

Rigorous well-defined execution plan

• Well-defined scope and budget
• Early work to establish firm pricing for key equipment, materials and services
• Healthy contingency for residual risk
• Progress has been safe, on time and on budget

Various factors to consider for project restart

• Global economic recovery
• Methanol market conditions
• Ability to effectively finance the project
• Ability for suppliers to execute construction and to deliver material and equipment

July 2020: Geismar 3 site
Strong cash flow generation with significant leverage to methanol prices
Average Modified ROCE of 12% over last 10 years

Adjusted EPS and Modified ROCE

1 Adjusted EPS = Adjusted net income per common share attributable to Methanex shareholders (excludes the after-tax mark-to-market impact of share-based compensation and the impact of certain items associated with specific identified events)

2 Modified ROCE = Adjusted net income before finance costs (after-tax) divided by average productive capital employed. Average productive capital employed is the sum of average total assets (excluding plants under construction) less the average of current non-interest-bearing liabilities.

3 Adjusted net income and Adjusted net income per common share are non-GAAP measures - for more information regarding non-GAAP measures, please see our 2019 Annual MD&A
Long-term valuation considerations

</tbody>
</table>

**Significant leverage to methanol prices - long-term average price ~$350/MT**

- Flexible cost structure as the price for approximately 60% of our natural gas supply (our most significant operating cost) is linked to methanol pricing – therefore, our operating costs move down as methanol prices decline.
- Cost structure per tonne continues to benefit from significant leverage on our fixed costs as production increases.
- Significant cash flow potential driven by leverage to methanol prices.

1. Methanex interest (63.1% Atlas, 50% Egypt)
2. Refer to slide 17 (footnote 1)
3. Refer to slide 17 (footnote 2)
4. Adjusted EBITDA reflects Methanex's pro rata ownership interest and assumes plants operate at full production rates except where indicated.
5. After lease payments, cash interest, debt service, maintenance capital (approx. $120 million), cash taxes and other cash payments.
6. Based on 76 million shares outstanding as of 6/30/2020 and share price of US$20/share.
Long-term valuation considerations (continued)

Estimated sensitivities
($ millions)

- EBITDA +/- $10/tonne ARP
- FCF +/- $10/tonne ARP
- EBITDA +/- 100,000 tonnes volume
- FCF +/- 100,000 tonnes volume

Sensitivities versus run-rate of:
- Average realized price: $350/tonne
- Volume: 8.1 million tonnes
- Adjusted EBITDA capability: $1.1 billion
- Free cash flow capability: $525 million

Estimate $10/MT increase in methanol price results in ~$60 million increase in Adjusted EBITDA
Average realized price per tonne

- ~ US$395 (real)
- ~ US$350 (nominal)

- Methanex posts reference prices:
  - Monthly in North America and Asia
  - Quarterly in Europe

- Realized pricing is lower than posted reference pricing due to customer discounts and other factors

Source: Methanex. Assumes 2% inflation.
Various short-term factors can affect earnings

**Illustrative impact on earnings**
($/tonne)

Margins at a given price are generally **higher** in a rising price environment

Margins are generally **lower** in a declining price environment

These factors are less meaningful in the long-term

- Difference between posted and realized prices can vary:
  - Rising prices can reduce/narrow our discount rate
  - Declining prices can increase/widen our discount rate

- FIFO inventory accounting can impact cost of sales:
  - Cost of sales can decrease in a rising price environment
  - Cost of sales can increase in a falling price environment

- Shipment timing can result in a short-term inventory build or draw position

- Planned/unplanned outages can temporarily increase logistics costs as we move product globally to serve our customers
Balanced approach to capital allocation
## Balanced approach to capital allocation

### ESSENTIAL

<table>

G1 & G2 builds
Solid financial position and liquidity

Strong liquidity position (as at 6/30/2020)
- Cash (Mx share)\(^1\) - $776 million
- Includes increased financial flexibility from draw on our credit facilities
- Negotiated meaningful financial covenant relief
- No near-term debt maturities
- Focused on cash preservation and continue to evaluate all options to ensure we maintain financial capacity and flexibility

Taken prudent steps to protect business
- Deferred ~$500 million in capital spending on Geismar 3 project for up to 18 months
- Reduced quarterly dividend ($100 million in annual cash savings)
- Reduce 2020 maintenance capital spending by $30 million

Balance sheet perspective
- Prudent approach to financial management
- Target ~3.0x debt/EBITDA over the cycle
- Current ratings: Moody’s Ba1 | S&P BB | Fitch BB

\(^1\) Includes Methanex proportionate share of cash
Methanex is committed to Responsible Care®

- The Responsible Care® Ethic and Principles for Sustainability is a United Nations recognized sustainability initiative adopted by the global chemical industry.
- At Methanex, Responsible Care® is the foundation of everything we do and a key element of our global culture:
  - Community safety
  - Employee health and safety
  - Environmental protection
  - Product stewardship
  - Social responsibility

https://www.methanex.com/responsible-care/responsible-care-sustainability-reports
## Best-in-class corporate governance

### BOARD COMPOSITION
- 11 of 12 Independent directors (92%)
- Separate chair and CEO
- All Committee members are independent
- Diversity policy and 42% of directors are female
- Active Board renewal process, average tenure is five years and average age is 61 years old
- Diverse skills matrix

### DIRECTOR COMPENSATION
- Required director equity ownership of 3x total annual retainer
- Prohibition on hedging
- Not eligible for stock options

### CORPORATE GOVERNANCE
- Strong risk and strategy oversight
- Annual Board, Committee and director evaluations
- Board orientation and education
- Code of business conduct
- In camera sessions at every Board and Committee meeting

### DIRECTOR COMPENSATION
- Annual election of directors
- Individual director elections
- Director majority voting policy
- Annual “Say-on-Pay”
Management alignment

• Executive shareholding requirements:
  – CEO – 5 times salary in Methanex shares or share units
  – Senior executives (5 members) – 3x salary
  – Other senior management (~60 employees) – 1x salary guideline

• Short-term incentive linked to ROCE (return on capital employed)

• Long-term incentive targets:
  – Stock options and share appreciation rights
  – Performance share units
    • Payout linked to relative total shareholder return and 3-year average ROCE
  – “…Management does well when shareholders do well!”
Summary

- Global industry leader with competitive assets
- Solid franchise value that is difficult to replicate
- Integrated global capabilities with network of production sites and global supply chain
- Solid financial position
- Significant cash flow potential driven by leverage to methanol prices
- Low capital cost growth potential in Louisiana
- Track record of returning excess cash to shareholders through dividends and share buybacks

Continue to deliver secure and reliable supply to our customers around the world. Well-positioned to capitalize on market recovery.
This presentation, our Second Quarter 2020 Management’s Discussion and Analysis ("MD&A") as well as comments made during the Second Quarter 2020 Investor Conference call contain forward-looking statements with respect to us and our industry. These statements relate to future events or our future performance. All statements other than statements of historical fact are forward-looking statements. Statements that include the words “believes,” “expects,” “may,” “will,” “should,” “potential,” “estimates,” “anticipates,” “aim,” “goal,” “targets” or other comparable terminology and similar statements of a future or forward-looking nature identify forward-looking statements.

More particularly and without limitation, any statements regarding the following are forward-looking statements: expected demand for methanol and its derivatives; expected new methanol supply or restart of idled capacity and timing for start-up of the same; expected shutdowns (either temporary or permanent) or restarts of existing methanol supply (including our own facilities), including, without limitation, the timing and length of planned maintenance outages; expected methanol and energy prices; expected levels of methanol purchases from traders or other third parties; expected levels, timing and availability of economically priced natural gas supply to each of our plants; capital committed by third parties towards future natural gas exploration and development in the vicinity of our plants; our expected capital expenditures; anticipated operating rates of our plants; expected operating costs, including natural gas feedstock costs and logistics costs; expected tax rates or resolutions to tax disputes; expected cash flows, earnings capability and share price; availability of committed credit facilities and other financing; our ability to meet covenants or obtain or continue to obtain waivers associated with our long-term debt obligations, including, without limitation, the Egypt limited recourse debt facilities that have conditions associated with the payment of cash or other distributions and the finalization of certain land title registrations and related mortgages which require actions by Egyptian governmental entities; expected impact of waivers associated with our long-term debt obligations on our financial condition as a consequence of actions taken or inaction by Egyptian governmental entities; our shareholder distribution strategy and anticipated distributions to shareholders; commercial viability and timing of, or our ability to execute future projects, plant restarts, capacity expansions, plant relocations or other business initiatives or opportunities, including our Geismar 3 Project; our financial strength and ability to meet future financial commitments; expected global or regional economic activity (including industrial production levels); expected outcomes of litigation or other disputes, claims and assessments; expected actions of governments, governmental agencies, gas suppliers, courts, tribunals or other third parties; and the potential future impact of the COVID-19 pandemic.

We believe that we have a reasonable basis for making such forward-looking statements. The forward-looking statements in this document are based on our experience, our perception of trends, current conditions and expected future developments as well as other factors. Certain material factors or assumptions were applied in drawing the conclusions or making the forecasts or projections that are included in these forward-looking statements, including, without limitation, future expectations and assumptions concerning the following: the supply of, demand for and price of methanol, methanol derivatives, natural gas, coal, oil and oil derivatives; our ability to procure natural gas feedstock on commercially acceptable terms; operating rates of our facilities; receipt or issuance of third-party consents or approvals, including, without limitation, governmental registrations of land title and related mortgages in Egypt and governmental approvals related to rights to purchase natural gas; the establishment of new fuel standards; operating costs, including natural gas feedstock and logistics costs, capital costs, tax rates, cash flows, foreign exchange rates and interest rates; the availability of committed credit facilities and other financing; timing of completion and cost of our Geismar 3 Project; global and regional economic activity (including industrial production levels); absence of a material negative impact from major natural disasters; absence of a material negative impact from changes in laws or regulations; absence of a material negative impact from political instability in the countries in which we operate; and enforcement of contractual arrangements and ability to perform contractual obligations by customers, natural gas and other suppliers and other third parties.

However, forward-looking statements, by their nature, involve risks and uncertainties that could cause actual results to differ materially from those contemplated by the forward-looking statements. The risks and uncertainties primarily include those attendant with producing and marketing methanol and successfully carrying out major capital expenditure projects in various jurisdictions, including, without limitation: conditions in the methanol and other industries including fluctuations in the supply, demand and price for methanol and its derivatives, including demand for methanol for energy uses; the price of natural gas, coal, oil and oil derivatives; our ability to obtain natural gas feedstock on commercially acceptable terms to underpin current operations and future production growth opportunities; the ability to carry out corporate initiatives and strategies; actions of competitors, suppliers and financial institutions; conditions within the natural gas delivery systems that may prevent delivery of our natural gas supply requirements; our ability to meet timeline and budget targets for our Geismar 3 Project, including cost pressures arising from labour costs; competing demand for natural gas, especially with respect to domestic needs for gas and electricity in Chile and Egypt; actions of governments and governmental authorities, including, without limitation, implementation of policies or other measures that could impact the supply of or demand for methanol or its derivatives; changes in laws or regulations; import or export restrictions, anti-dumping measures, increases in duties, taxes and government royalties and other actions by governments that may adversely affect our operations or existing contractual arrangements; world-wide economic conditions; the future impact of the COVID-19 pandemic; and other risks described in our 2019 Annual Management’s Discussion and Analysis and our Second Quarter 2020 Management’s Discussion and Analysis.

Having in mind these and other factors, investors and other readers are cautioned not to place undue reliance on forward-looking statements. They are not a substitute for the exercise of one’s own due diligence and judgment. The outcomes implied by forward-looking statements may not occur and we do not undertake to update forward-looking statements except as required by applicable securities laws.

<td>Methanol-to-olefins (MTO)</td>
<td>~16%</td>
<td>• Used as an alternative feedstock to produce light olefins (ethylene and propylene) to produce various everyday products used in packaging, textiles, plastic parts/containers and auto components</td>
</tr>
<tr>
<td>Methyl tert-butyl ether (MTBE)</td>
<td>~11%</td>
<td>• Used as an oxygenate blending into gasoline to contribute octane and reduce the amount of harmful exhaust emissions from motor vehicles</td>
</tr>
<tr>
<td>Fuel applications</td>
<td>~11%</td>
<td>• Used as an alternative clean-burning fuel for transportation, industrial boilers and kilns, and in a smaller quantity, for cooking stoves</td>
</tr>
<tr>
<td>Dimethyl ether (DME)</td>
<td>~6%</td>
<td>• A clean-burning fuel that is used as a substitute for liquified petroleum gas (LPG) for household cooking and heating. Can be used as a clean-burning substitute for diesel fuel in transportation</td>
</tr>
<tr>
<td>Biodiesel</td>
<td>~4%</td>
<td>• A renewable fuel made from plant oils or animal fats that uses methanol in the production process</td>
</tr>

Methanex cost structure

Representative operating cost distribution

Natural gas
- Flexible price structure as approximately 60% of our natural gas supply contracts are linked to methanol prices:
  - North America: ~75% of current natural gas requirements under long-term fixed price contract or hedges
  - Rest of world: natural gas price varies based on methanol prices which enables assets to be competitive across price cycle

Logistics
- Fleet of ~30 leased and owned vessels supplemented with short-term COA vessels and spot vessel shipments
- Integrated supply chain allows benefit of back-haul shipments
- Network of owned and leased terminals worldwide
- Various in-region logistics capabilities including tanker, barge, rail, truck and pipeline

Fixed manufacturing and G&A costs
- Primarily people costs (approx. 1,545 employees)

1 Natural gas prices vary with methanol pricing.
2 Logistics costs vary based on oil/bunker fuel prices.
Thank you
